

PRODUCT UPDATE:

ALLIGATOR SENS.IT RS-SERIES TPMS COVERS 8TH- GEN HYUNDAI SONATA

Alligator sens.it RS & sens.it RS+ universal TPMS sensors now cover the new eight-generation Hyundai Sonata sedan (2020-23).

The car is a part of a growing number of Hyundai/Kia vehicles with advanced auto-learning technology. The tire-pressure sensors work with the ABS system to automatically locate and store new sensor IDs quickly, so the driving time can be reduced after installing new parts.

If no scan tool is available for manual sensor ID registration, then simply park the car for 20 minutes, then drive it until the pressures for the new tires show up on the display.

Using sensors that have an auto-learning feature is especially helpful for DIYers that install wheels themselves but don't have access to a scan tool for new sensor ID registration and for wheel shops that rely on the end-users to handle the TPMS learning process.

The sensor also supports location detection, so when rotating tires, there's no need to reset the system manually - simply follow the same procedure as auto-learning and the display will show the new locations on the dash after driving for a few minutes.

By continuing to use Alligator TPMS sensors, your shop will be working with a part that supports the full range of OE features which will make the techs' jobs easier, reduce unnecessary downtime in the bays for TPMS learning or sensor issues, help your business' bottom line, and keep your customers happy and coming back.

When replacing OEM sensors with aftermarket sensors, rest assured that RS series TPMS sensors from Alligator will provide all the functionality your vehicle delivers! Regardless of the tool you use to program the sensors, this new vehicle should be available for programming after completing the latest update.
