

PRODUCT UPDATE:

ALLIGATOR SENS.IT RS-SERIES TPMS COVERS FORD BRONCO SUV

Alligator sens.it RS & sens.it RS+ universal TPMS sensors now cover the 6th-gen, all-new Ford Bronco (released for the 2021 model year). This vehicle has hit the market by storm and Alligator is proud to offer parts for this impressive new SUV.

The all-terrain Bronco is another addition to the expanding list of Ford vehicles that can automatically learn and detect TPMS sensors once installed into each wheel assembly, or if rotating tires at regular intervals. Simply install the new Alligator sens.it RS/RS+ universal TPMS sensors, then begin driving the SUV - the system will register the new IDs automatically.

The Alligator TPMS sensor also supports location detection, so when rotating tires, there's no need to reset the system manually. Simply follow the same procedure as auto-learning and the display will show the new tire locations on the dash after driving for a few minutes.

By continuing to use Alligator universal TPMS sensors, shops can ensure they are working with a part that supports the full range of OE features, helps make the techs' jobs easier, reduces unnecessary downtime in the bay for TPMS learning or general sensor issues, helps the bottom line, and, most importantly, keeps customers happy and coming back. When replacing OEM sensors with aftermarket sensors, rest assured that RS series TPMS sensors from Alligator will provide all the functionality that the car delivers! Regardless of the tool that's used to program the sensors, this vehicle should be available for programming after completing the latest update.
