

PRODUCT UPDATE:

## ALLIGATOR SENS.IT RS-SERIES SENSORS SUPPORT AUTO-LEARNING ON CHEVY VOLT & COLORADO

Alligator sens.it RS & sens.it RS+ universal TPMS sensors now support auto-learning on the Chevrolet Volt (offered on the 2019 model) and Chevy Colorado (introduced in model year 2021).

These vehicles are among the first GM models to have an automatic learning feature for the TPMS. Auto Learn allows the vehicle to automatically locate sensor locations when rotating tires or after installing new sensors.

Using sensors that have an auto-learning feature is especially helpful for DIYers that install wheels themselves but don't have access to a scanner for registering the new IDs and for wheel shops that rely on the end-users to handle the TPMS learning process.

Shops that use Alligator TPMS sensors are working with a part that supports the full range of OE features which makes the techs' jobs easier, reduces unnecessary down-time in the bays for TPMS learning or sensor issues, helps the business' bottom line, and keeps its customers happy and coming back.

When replacing OEM sensors with aftermarket units, rest assured that TPMS sensors from Alligator will provide the same functionality that the vehicle offers!

Regardless of the tool that's used to program the sensors, this car & truck should be available for programming after completing the latest update.

**sens.it®**  
It Just Makes Sense.
