

PRODUCT UPDATE:

ALLIGATOR SENS.IT RS-SERIES TPMS COVERS 8TH- GEN HYUNDAI SONATA

Alligator sens.it RS & sens.it RS+ universal TPMS sensors now cover the new eight-generation Hyundai Sonata sedan, which was introduced in model year 2020.

The car is a part of a growing number of Hyundai/Kia vehicles with advanced auto-learning technology. The tire-pressure sensors work with the ABS system to automatically locate and store new sensor IDs quickly, so the driving time can be reduced after installing new parts.

If a scan tool isn't available for sensor-ID registration, then simply park the car for 20 minutes and drive until the pressures for the new tires show up on the display.

Using sensors that have an auto-learning feature is especially helpful for DIYers that install wheels themselves but don't have access to a scanner for registering the new IDs and for wheel shops that rely on the end-users to handle the TPMS learning process.

The sensor also supports location detection, so when rotating tires, there's no need to reset the system manually - simply follow the same procedure as auto-learning and the display will show the new locations on the dash after driving for a few minutes.

Shops that use Alligator TPMS sensors are working with a part that supports the full range of OE features which makes the techs' jobs easier, reduces unnecessary down-time in the bays for TPMS learning or sensor issues, helps the business' bottom line, and keeps its customers happy and coming back.

When replacing OEM sensors with aftermarket units, rest assured that TPMS sensors from Alligator will provide the same functionality that the vehicle offers! Regardless of the tool that's used to program the sensors, this car should be available for programming after completing the latest update.
