

PRODUCT UPDATE:

# ALLIGATOR SENS.IT RS-SERIES TPMS COVERS PORSCHE TAYCAN EV

Alligator sens.it RS & sens.it RS+ universal TPMS sensors now cover the all-new Porsche Taycan battery-electric vehicle, introduced for model year 2020.

The car is another example of a German vehicle that has an automatic TPMS relearn feature, so special tools aren't required when installing new sensors.

Once the sensors have been mounted into the wheels, install the assemblies to the car then start the engine. On the multi-function display, select Settings, Vehicle, then Tyre Pressure Monitoring. Update the system with any applicable changes (tire type, tire size, full load / partial load, etc) then start driving. The tire warning light will appear, and the display show the target psi for each tire. Once all sensors have been registered, the warning light will clear and the display will show the actual pressures inside each tire.

Using sensors that have an auto-learning feature is especially helpful for DIYers that install wheels themselves but don't have access to a scanner for registering the new IDs and for wheel shops that rely on the end-users to handle the TPMS learning process.

Shops that use Alligator TPMS sensors are working with a part that supports the full range of OE features which makes the techs' jobs easier, reduces unnecessary downtime in the bays for TPMS learning or sensor issues, helps the business' bottom line, and keeps its customers happy and coming back.

When replacing OEM sensors with aftermarket units, rest assured that TPMS sensors from Alligator will provide the same functionality that the vehicle offers! Regardless of the tool that's used to program the sensors, this car should be available for programming after completing the latest update.

**sens.it®**  
It Just Makes Sense.
